

ENOCH OLALEYE

Cloud Engineer · AWS Infrastructure Architect · Cloud Migration Specialist

+234 902-146-2752 · enochsolaleye@gmail.com · Ota, Lagos Outskirts, Nigeria github.com/enocholaleye · linkedin.com/in/enocholaleye · enocholaleye.github.io

PROFESSIONAL SUMMARY

Cloud Engineer and AWS Infrastructure Architect with 15 years of hands-on IT infrastructure experience. My portfolio includes four self-directed, production-grade AWS projects designed to the exact standards of Nigeria's most regulated industries — fintech (CBN compliance), healthcare (NDPA compliance), logistics, and large-scale e-commerce with Kubernetes on EKS. I bring deep expertise in Terraform IaC, GitHub Actions CI/CD, Docker, Amazon EKS, and AWS security architecture, anchored by real-world experience migrating and managing enterprise infrastructure at Covenant University. My on-premises roots in VMware, Proxmox, and Linux give me a full-stack infrastructure perspective that cloud-only engineers rarely possess.

PORTFOLIO PROJECTS — SELF-DIRECTED, PRODUCTION-GRADE AWS ARCHITECTURES

Independently designed and built to production standards. All infrastructure is Terraform-managed, CI/CD automated via GitHub Actions, and publicly documented at github.com/enocholaleye.

PROJECT 01 NexaHub Simulation — E-Commerce Platform on Amazon EKS · E-Commerce Architecture · Kubernetes

Stack: Amazon EKS · Helm · HPA · Cluster Autoscaler · ALB Ingress Controller · External Secrets Operator · Docker · ECR · RDS Aurora Multi-AZ · ElastiCache · Terraform · GitHub Actions · CloudWatch Container Insights

- ▶ Designed and deployed a production Amazon EKS cluster simulating a high-traffic e-commerce marketplace — 11 containerised microservices, namespace-based multi-tenancy, and per-service Horizontal Pod Autoscaling (HPA) representing real-world scaling challenges (e.g. a payments service scaling to 50 pods independently while low-traffic services remain at 1–2 pods).
- ▶ Implemented GitOps CI/CD pipeline: code push → GitHub Actions → Docker build → ECR push → Helm deploy to EKS, full rollout under 8 minutes with zero manual steps.
- ▶ Delivered Helm charts portable to GKE unchanged — demonstrating multi-cloud workload portability as a design constraint from day one.
- ▶ Kubernetes Resource Quotas enforce guaranteed compute for premium namespaces versus best-effort standard namespaces — modelling real multi-tenancy requirements.

PROJECT 02 VaultEdge Simulation — CBN-Regulated Digital Banking Infrastructure · Fintech · Compliance Architecture

Stack: ECS Fargate · RDS Aurora Multi-AZ · API Gateway · Lambda · WAF · GuardDuty · KMS · Security Hub · AWS Config · Secrets Manager · CloudTrail · Docker · ECR · Terraform · GitHub Actions

- ▶ Designed production-grade, CBN-compliant AWS infrastructure modelled on the architecture required by a licensed Nigerian digital bank — sized and engineered to the demands of high-volume core banking APIs.
- ▶ Implemented defence-in-depth security architecture: WAF at the edge, GuardDuty threat detection, KMS encryption at rest and in transit, Secrets Manager (zero hardcoded credentials), AWS Config for compliance posture, and CloudTrail for full audit logging.
- ▶ ECS Fargate for containerised microservices (serverless compute — no node management); Aurora Multi-AZ for zero-downtime database operations with automatic failover.
- ▶ Full infrastructure provisioned as Terraform code; GitHub Actions pipeline delivers automated, auditable deployments — entire environment reproducible from a single command.

PROJECT 03 MediCore Simulation — NDPA-Compliant Healthcare EHR Infrastructure · Healthcare · Compliance Architecture

Stack: VPC · EC2 · RDS MySQL Multi-AZ · ALB · Auto Scaling Groups · Route53 · ACM · Secrets Manager · CloudTrail · CloudWatch · Docker · ECR · Systems Manager · Terraform · GitHub Actions

- ▶ Architected a secure, NDPA-compliant AWS environment modelled on the infrastructure requirements of a multi-site hospital EHR platform — designed to handle patient record workloads with zero-tolerance availability requirements.
- ▶ Implemented Auto Scaling Groups, multi-AZ RDS, Systems Manager (no SSH exposure), ACM-managed certificates, and CloudTrail audit logging — demonstrating how compliance and availability coexist in regulated cloud environments.

PROJECT 04 SwiftHaul Simulation — Emergency Cloud Migration Architecture · Logistics · Cloud Migration

Stack: VPC · EC2 · RDS MySQL · S3 · ALB · NAT Gateway · IAM · CloudWatch · SNS · Terraform · GitHub Actions

- ▶ Designed and implemented a full AWS migration architecture modelled on the scenario of a logistics company moving off failing on-premises infrastructure under time pressure — demonstrating emergency migration decision-making, HA design, and zero-data-loss strategy.
- ▶ Entire infrastructure provisioned via Terraform; GitHub Actions CI/CD pipeline operational from day one.

CORE SKILLS

AWS Core	EC2 · S3 · RDS · VPC · IAM · ALB · Auto Scaling · Route53 · ACM · CloudWatch · SNS · CloudTrail
AWS Advanced	EKS · ECS Fargate · Aurora · API Gateway · Lambda · Secrets Manager · KMS · WAF · GuardDuty · Security Hub · AWS Config · Systems Manager · ECR · ElastiCache
Kubernetes	Amazon EKS · Helm · HPA · Cluster Autoscaler · ALB Ingress Controller · External Secrets Operator · kubectl · Namespaces · Resource Quotas
IaC & CI/CD	Terraform · GitHub Actions · Jenkins · Docker · GitOps · Infrastructure as Code
Security	CBN Compliance Architecture · NDPA Compliance · WAF · GuardDuty · KMS · Secrets Management · CloudTrail · Kaspersky EDR · Sophos Central
Virtualisation	Proxmox VE · VMware ESXi · Hyper-V · TrueNAS · Cluster Management · Shared Storage
Systems & OS	Ubuntu Server · Windows Server · Active Directory · Bash · PowerShell · Python · System Monitoring
Networking	TCP/IP · DNS · DHCP · VPN · Firewalls · Access Control · Network Troubleshooting
AI & Prompt Eng.	Prompt Engineering · ChatGPT · LLM workflows · AI-assisted automation

PROFESSIONAL EXPERIENCE

Senior Systems & Server Administrator | Covenant University, Ota, Nigeria2023 – Present

- ▶ Administer multi-node Proxmox VE and VMware ESXi clusters hosting mission-critical workloads: Sage 300 ERP, academic portals, University Medical Centre clinical systems, and storage services.
- ▶ Designed and executed migration of IT asset management system (Snipe-IT) from on-premises Proxmox VE to AWS — EC2, RDS, and S3 — delivering measurable improvements in availability and scalability.
- ▶ Led university-wide endpoint security deployment of Kaspersky Next EDR and Sophos Central across 800+ endpoints, achieving centralised threat detection and policy enforcement.
- ▶ Architect backup, failover, and disaster recovery strategies; develop IT policies, SOPs, and procurement guidelines for a campus of 10,000+ users.

HPC Infrastructure Support | CApIC-ACE, Covenant University2023 – 2024

- ▶ Supported HPC cluster deployment and operations; automated compute node configuration; ensured resource availability for active academic research teams.

Systems Technician (Tier 2/3 Support) | Covenant University, Ota, Nigeria2020 – 2023

- ▶ Delivered advanced support for Windows and Linux environments across servers, desktops, and HPC systems; escalation point for cross-department technical incidents.

- First-line technical support for 500+ users; maintained asset inventories, service records, and support documentation.

CERTIFICATIONS & EDUCATION

Certifications

- AWS Certified Solutions Architect – Associate (In Progress)
- Google IT Support Professional Certificate
- Network Security Essentials
- MTA: Windows OS Fundamentals

Education & Training

- BSc Mathematics & Computer Science — NOUN (in view, 2026)
- AWS SAA-C03 Bootcamp — Kigali, 2024
- HPC Workshops — Nigeria (2021, 2023, 2025)
- Cybersecurity Training — ACE OAK-PARK, 2023
- Ongoing Cloud & DevOps Training (2024 – Present)
